

OSA-5269-63

4 October 1963

Dear Al:

Reference our telecon this date. Wedge soles are required for the full pressure suit boots. Please keep me advised on the modifications necessary to accomplish this. Am particularly interested in a disconnect feature that would allow a man descending in a parachute to remove the spurs. The life raft boarding demonstration pointed out the possibility of the spurs cutting the raft.

The people in contracts did not have the ECP on the suit altimeters readily available but they are going to follow up.

Regards,

Harry C.
